

i1Studio Release Notes

1. New features

Version 1.1.0

- Introduces **Data Save Workflow** for printer profiling. This feature is ideal for users who want to:
 - Finish the profiling process at a later time
 - Allow the test charts to dry for an extended time period
 - Create a printer profile for a remote printer such as at a photo lab or another location within a building
- Added ability to save ICC profiles in either Version 4 or Version 2
- Added Profile Reminder feature to remind users to re-profile their displays
- Updated Style Profiles in Black & White workflow
- Several usability improvements and minor bug fixes.

Version 1.0.0

- **i1Studio** software provides the ability to profile monitors, projectors, scanners and printers.
- Monitor module supports both photo and video workflows.
- Printer modules include ability to create profiles for both color prints and Black & White prints.
- Profile Optimization module is designed to optimize a profile using colors extracted from a specific image and/or measured spot colors.
